

Remote Work & Attendance Policy

Applies to all ITBD employees and vendors across US, UK, and Philippines operations.

1. Purpose

This policy establishes consistent expectations for remote and hybrid work arrangements, and defines how attendance is recorded, verified, and reconciled with payroll across all ITBD work locations.

2. Scope

This policy applies to all active employment records regardless of employment type (employee, vendor, contractor) and covers shift assignment, punch capture, grace periods, and the finance handoff cycle.

3. Policy Statement

- Attendance is captured automatically through badge/access-control taps, mobile geofenced check-in, or approved manual entry — never through unverified self-reporting alone.
- Each shift definition carries its own grace-in and grace-out window; a punch inside the grace window is never marked late.
- Remote and hybrid staff must check in through the mobile geofenced option when working from an approved location outside the office.
- Attendance for the 21st–20th finance cycle locks automatically once the cycle closes and is handed to the payroll vendor in a standard export format.

4. Procedure

On arrival, employees tap their badge at the nearest access-control reader or open the mobile app for a geofenced check-in. The system immediately reflects the employee's status as Present, with the exact in-time recorded. The same applies on departure for the out-time. Any exception (forgotten tap, device outage) must be logged as a manual entry and approved by the reporting manager within the same payroll cycle.

5. Responsibilities

Employees are responsible for tapping in/out accurately. Managers are responsible for reviewing and approving manual corrections. People & HR is responsible for maintaining shift definitions, grace periods, and the payroll export configuration.
